Office Action Summary	Application No. 10/798,179	Applicant(s) ARNDT ET AL.	
	Examiner Tuan D. Nguyen	Art Unit 2614	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11 March 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-16 are rejected under 35 U.S.C. 102(e) as being anticipated by the applicant's cited reference EP0982971 or U.S. patent number 6,654,468 (Thompson).

Regarding claims 1, 8, 9 and 16, Thompson discloses a hearing device (figures 1-6) comprising a plurality of microphones for receiving incoming audio signals, each microphone (12, 14) generating an output signal dependent on the audio signals received by that microphone, said microphones having respectively different sensitivities such that a difference exists between a first output signal from a first of said plurality

of microphones and a second output signal from a second of said plurality of microphones; a first measurement unit (22) measuring a first amplitude of said first output signal in a predetermined frequency range; a second measurement unit (24) measuring a second amplitude of said second output signal in said predetermined frequency range; and a filter (30, 32, 16) for reducing said difference by filtering said first output signal dependent on said first amplitude and on said second amplitude.

Regarding claims 2, 3, 10 and 11, Thompson also discloses employing at least one frequency band below 150 Hz as said predetermined frequency range (column 4 lines 52-65).

Regarding claims 5 and 13, Thompson further discloses employing a filter, for filtering said first output signal, having a transfer function with a numerator polynomial and a denominator polynomial, and wherein the step of filtering said first output signal comprises multiplying said first output signal with one of said numerator polynomial or said denominator polynomial (column 5 lines 10-30, column 6 lines 45-60, column 7 lines 1-45).

Regarding claims 4, 6, 7, 12, 14 and 15, Thompson also shows conducting said filtering in a feedback regulation loop, and employing parameters in said loop for equalizing said first and second amplitudes (see figs.4, 6).
